PREFACE

Each decennial Census in India throws up a large mass of data, covering a number of characteristics, often cross-classified by one or more other characteristics. The tables containing these data upto various levels of presentation go into hundreds of all-India and State or Union Territory-level volumes.

While for indepth studies relating to particular parameters and particular levels of data-presentation, reference has necessarily to be made to the concerned volumes, we thought that a handy volume containing some key tables in some key areas may be of quite some use, for purposes of ready reference, alike to the researcher, the administrator and the lay person. The value of such a compendium, we further thought, will be enhanced if the tables are hacked up by and illustrated through maps, charts and diagrams.

The present volume aims to be just this. Of course, no such publication can contain all the relevant information in all forms and at all levels. But we have tried to make it as rich and varied as possible, with some of the tables and illustrations specially prepared to serve the purpose in view. Some data generated by the Sample Registration System and some material from the Population Projections made by the Expert Committee under the chairmanship of the Registrar General, India have also been included to enable the volume to have a rounded-off profile.

I am extremely happy to be able to present this publication on the occasion of the First Data Users' Conference for the 1991 Census. This has meant a lot of hard work at short notice for a number of persons. I thank all of them.

V.S. Verma
Registrar General, India

New Delhi

1. POPULATION CHARACTERISTICS

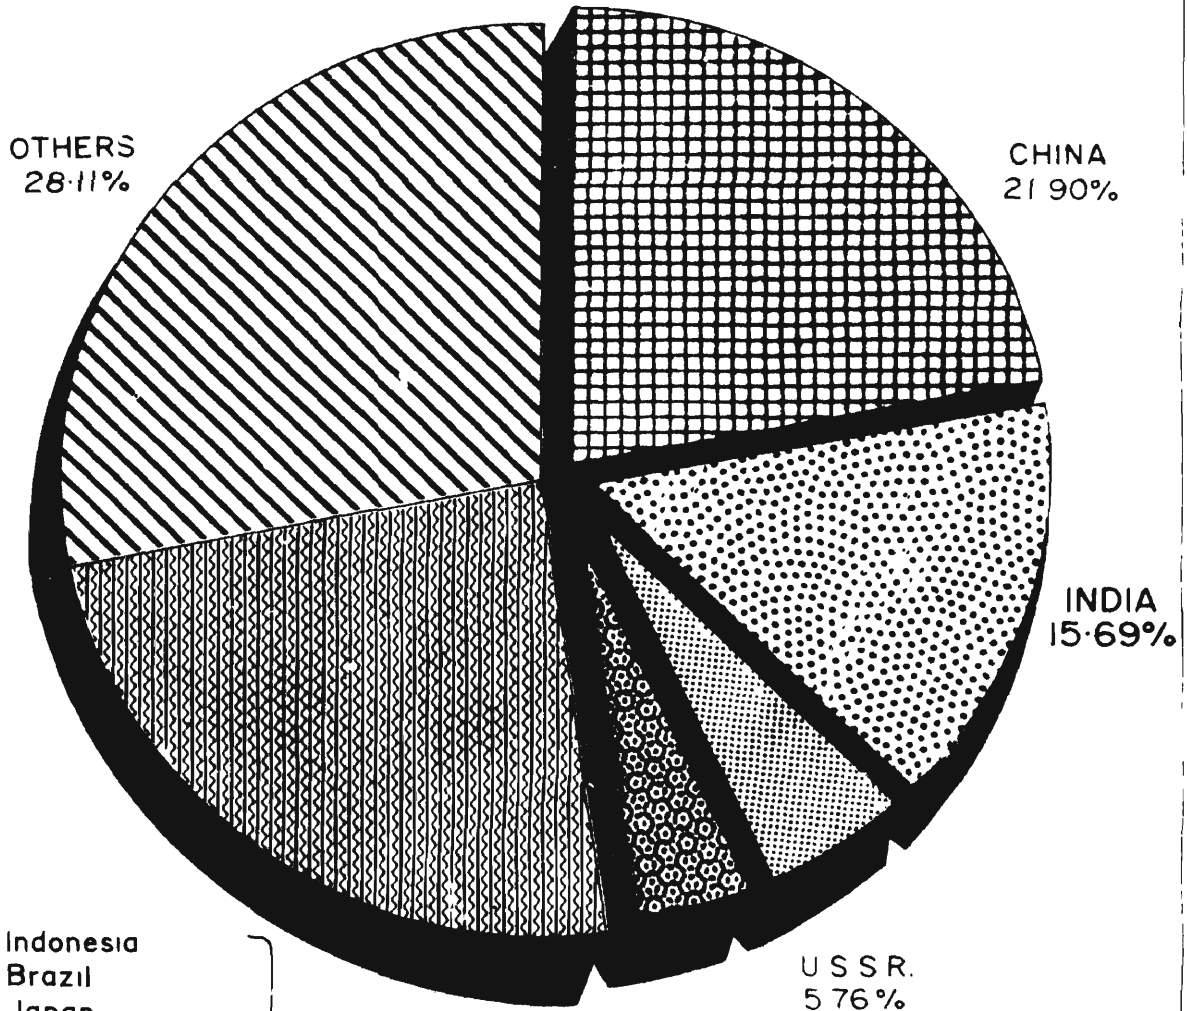

India's population is acknowledged as the second largest in the world. The decennial census provides a snap-shot, as it were, of our population bringing out in bold relief its immense diversity. It has also the distinct advantage of throwing a fund of demographic material to examine changes over time.

The basic population data given in this Section unfolds the story of our growing millions. It should serve as a useful reference material to one and all, demographer and layman alike. These broadly bring out: the trends in growth of population in the country as well as its constituents and changes in characteristics such as density, sex ratio and age structure. For the first time in the recent Census history, information on people who unfortunately suffer from some major physical disabilities is also given. Our population was growing at a rate below one per cent per annum till 1921 and below 1.50 per cent per annum during 1921-51. The growth rate increased to 1.96 per cent per annum in 1951-61, to 2.20 per cent in 1961-71 and 2.25 per cent in 1971-81. Among the 14 states (excluding Assam) with more than 10 million population in 1981, eight states namely, Gujarat, Haryana, Kerala, Madhya Pradesh, Maharashtra, Orissa, Tamil Nadu and West Bengal have shown a decline in growth rate in the decade 1971-81 compared to 1961-71. In Andhra Pradesh Bihar, Karnataka, Punjab, Rajasthan and Uttar Pradesh the growth rate in 1971-81 has been above that of the previous decade.

The percentage of rural population declined from 80.1 per cent in 1971 to 76.7 per cent in 1981. The percentage of urban population was 23.3 per cent in 1981 as against 19.9 per cent in 1971.

Sex ratio, defined as the number of females per 1000 males has been adverse to females in the country as a whole in all the censuses. It has been declining till 1971 but has shown a slight improvement in 1981. Only in Kerala state the sex ratio has been favourable to females. The proportion of population in the age group 0-9 in the country (excluding Assam) has declined from 29.47 per cent in 1971 to 26.66 per cent in 1981. The proportion in the age group 0-14 has shown a decline in 1981 compared to 1971.

2. ECONOMIC CHARACTERISTICS

Economically active population forms the back-bone of our developing economy. The Census constitutes the most comprehensive source of information on workers, marginal workers and non-workers. A large volume of data pertaining to these categories such as age, sex rural and urban distribution as well as industrial and occupational classifications have flown out of the 1981 Census. This would go a long way in determining the development strategy.

The conceptual divergences of different economic terms from Census to Census has attracted considerable attention in scholarly circles. In order to make the 1981 Census economic data somewhat comparable with that of 1971 and 1961 Censuses the trichotomy of "workers", "non-workers" and "marginal workers" was adopted in the 1981 Census. Information on "seeking/available for work" in respect of marginal workers and non-workers was a new feature in the 1981 Census.

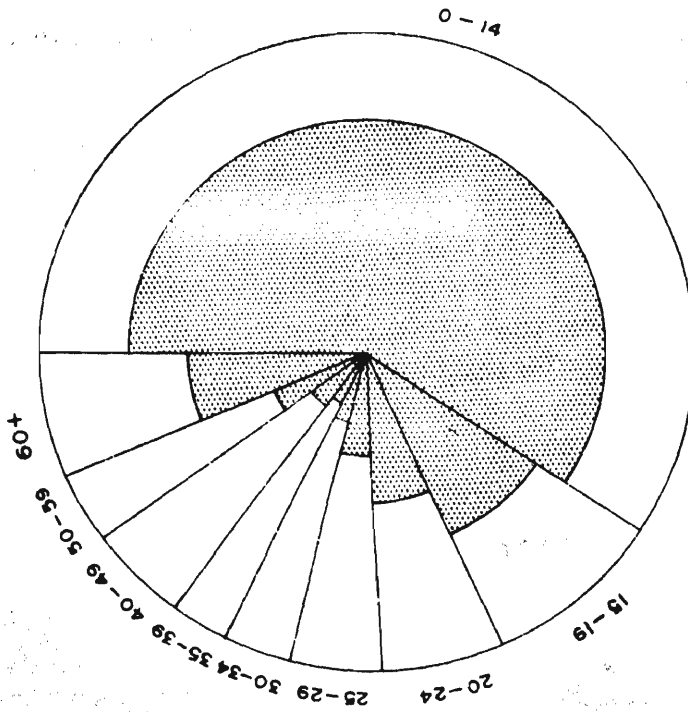

The total work force may be considered as being made up of main workers and marginal workers. In general the total work force of 1981 Census could be compared with workers plus 'non-workers with secondary work' of the 1971. Taking both main and marginal workers together, the combined work participation rate in 1981 was 36.8 per cent as against 36.1 per cent in 1971. The combined male work participation rate was 52.65 per cent in 1981 as against 52.75 per cent in 1971 while the combined female participation has increased to 19.76 per cent in 1981 from 14.15 per cent in 1971. The increase is mainly due to short increase in rural areas. Of the total work force 42.06 per cent are cultivators and 26.31 per cent agricultural labourers.

3. LITERACY AND EDUCATION

Mass education and literacy are a hallmark of modern society. Recognizing this, developing countries generally view education as a necessary and basic ingredient of economic and social development planning. In India, the goal of free and compulsory education through the age of 14 is enshrined as a Directive Principle of the Constitution. A prominent goal of India's Plan documents is the achievement of universal availability and equality of opportunity for education as a basic means of promoting the general welfare.

Considerable progress has been made with regard to the attainment of universal literacy. However, the crude literacy rate was still only 36 per cent as revealed by the 1981 Census. Progress achieved has also not been uniform from State to State.

4. MARITAL STATUS, FERTILITY AND MORTALITY

This section contains information on components of natural increase of population and connected factors like marital status, cause profile of mortality and the like. Data on distribution of population by marital status and other nuptiality indicators are based on recent censuses of population and analytical reports thereon.

The Office of the Registrar General, India conducts annually two sample surveys, one under the Sample Registration System and the second under what was earlier known as Model Registration Scheme and has now been renamed as Survey of Cause of Death in Rural Areas.

The Sample Registration System is the main source of information of fertility and mortality indicators at state and national levels.

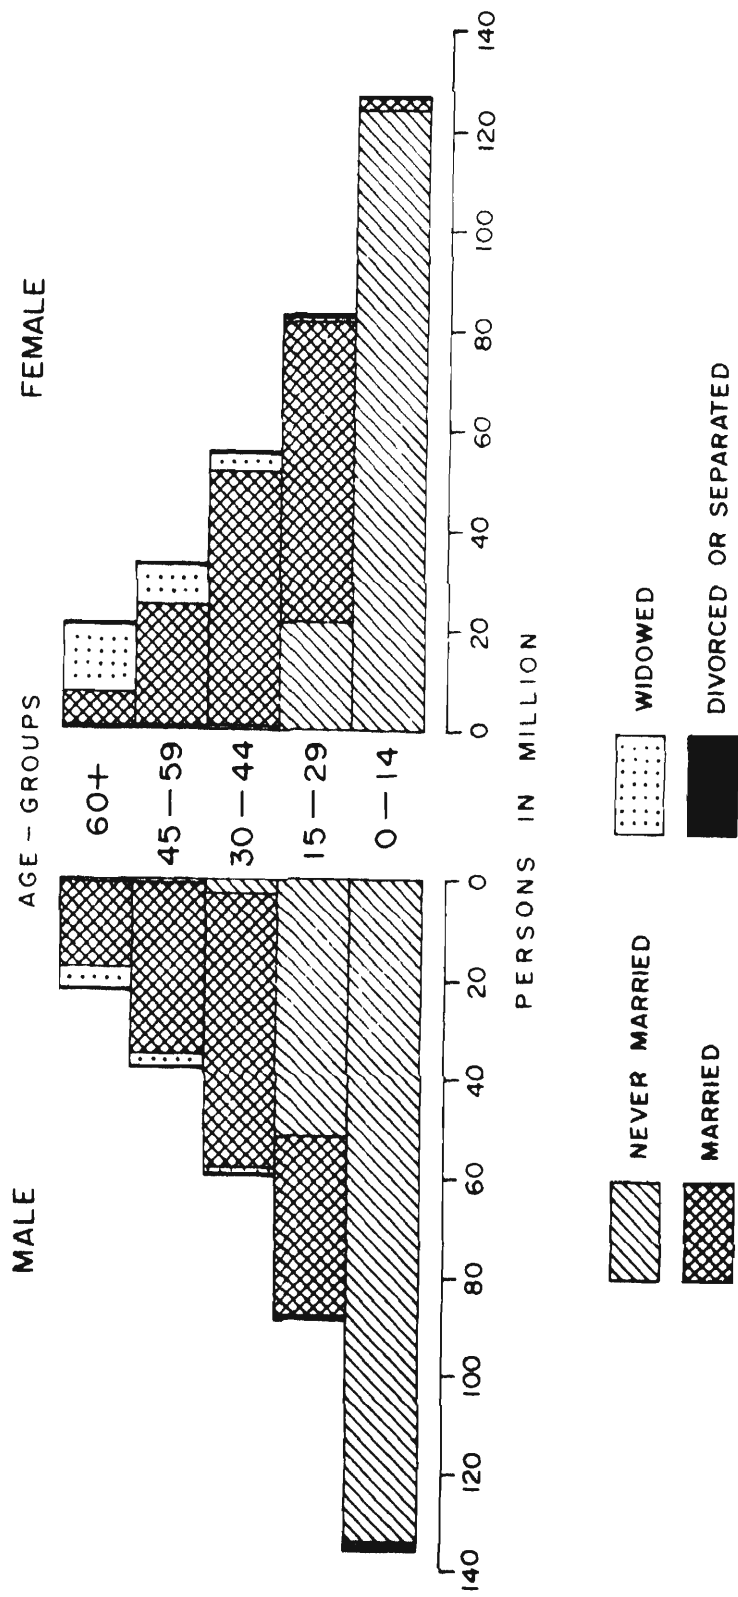

The cause-profile of deaths in rural areas has been the subject of the second annual survey covering headquarter villages of 1200 randomly selected Primary Health Centres.

Similar data for urban areas emanate from the scheme on medical certification of cause of deaths—an integral part of the Civil Registration System.

5. MIGRATION, URBANISATION AND MEGA CITIES

The urban population of India (including Assam) was 160 million in 1981. The proportion of urban population to total population in India is relatively low being only 23 per cent. However, the rate of growth of urban population has been quite high in recent years. During the last decade, urban population of India increased by 46.8 per cent. More than three-fifth of the urban population of India lived in Class I cities in 1981, while the 12 million-plus cities contained more than one fourth of the total urban population. On the other hand, proportion of population of Class II towns, that is towns with population between 50,000 and 100,000, has remained more or less constant at 11 per cent. The proportion of urban population living in towns with a population of 20,000 or below has been declining. 26 per cent of the urban population in northern zone, 25 per cent in the western zone and 31 per cent in eastern zone lived in Delhi, Bombay and Calcutta respectively.

More than 60 per cent of the migrants migrate within the district of enumeration. About 20 per cent of the migrants migrate from other districts of the state. Thus in all only about one migrant out of seven migrate outside the state.

A series of special tables about the million-plus cities has also been included in this Section. In mega-cities of Calcutta, Bombay, Delhi, Ahmadabad, Pune and Kanpur, 60 to 75 per cent of the migrants migrating for employment, are from rural areas. Migrants constitute one third to one half of the population in most of these cities.

A large proportion of the male migrants in these cities have come in search of employment. In Greater Bombay, Delhi, Madras, Bangalore and Jaipur more than half of the male migrants have migrated for employment.

In Calcutta, Greater Bombay, Ahmadabad, Bangalore, Pune and Kanpur more than one third of the male workers are engaged in manufacturing, processing, servicing and repairs other than household industry.

In all cities female workers are concentrated in "other services", predominantly so in Calcutta, Delhi, Kanpur, Jaipur and Lucknow.

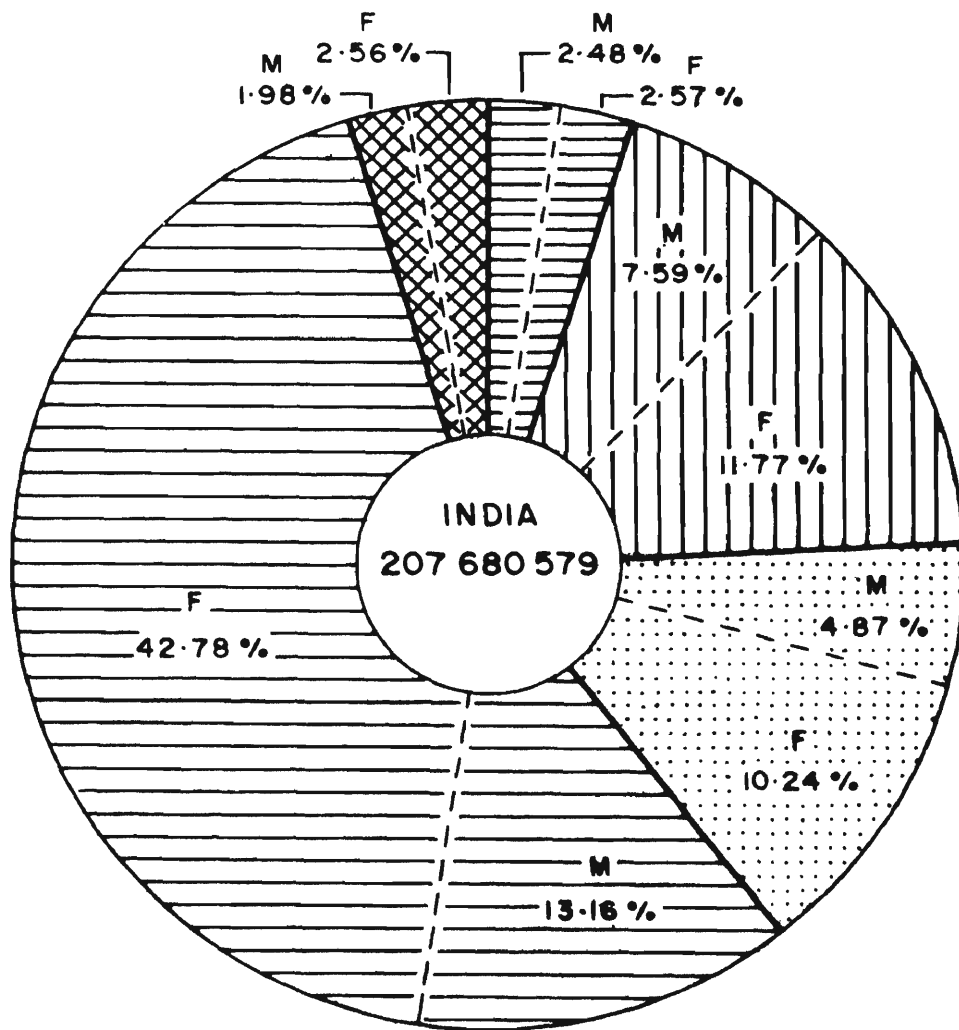

Delhi and Nagpur have emerged as multifunctional cities while Lucknow is predominantly service oriented.

More than 40 per cent of the households in these cities are living in single rooms, the proportion being as high as 69 per cent in Greater Bombay. 60 per cent or more of the households in these cities have electricity.

The proportion of households having toilet facilities is highest in Calcutta (about 86 per cent) while it is only about 60 per cent in Nagpur. On the other hand 90 per cent or more of the households in Greater Bombay, Ahmadabad and Pune have access to tap water while only 52 to 56 per cent of the households in Madras and Calcutta have this facility.

1971	830	11,752,123	10.90
1981	1,059	15,006,860	9.52

* Includes uninhabited town Badrinathpuri.

(a) An urban agglomeration has been classified according to total population

Notes:

1. India figures exclude Assam where no census was taken in 1981 owing to disturbed conditions prevailing there at the time of Census. For comparative purpose the figures of Assam have also been excluded from 1901 to 1971.
2. Six towns in 1941, four towns in 1931 and 1921 and two towns in 1911 and 1901 of Goa, Daman & Diu were in existence before 1950 and have been shown only in 'All Classes'. Since their population in previous years i.e. 1901-1941 could not be ascertained, they cannot be assigned to their appropriate classes and also have been left out in working out the percentage of population in this Table for India.
3. Percentage of India is worked out after excluding the population of 12,019 of Kanchrapara rural development colony in 1951 from 'All Classes' which gave place to Kalyani and Gayeshpur Govt. Colony towns of Nadia District of West Bengal in 1961.
4. An urban agglomeration has been treated as a continuing physical entity in the previous decades as a single unit and classified according to the population of the urban agglomeration in that Census.

Note :1. India's figures exclude Assam where no censuses were taken in 1981 owing to disturbed conditions prevailing there at the time of Census. For comparative purpose the figures of Assam have also been excluded from 1961 and 1971.

2. An urban agglomeration has been treated as a continuing physical entity in the previous decades as a single unit and classified according to the population of the urban agglomeration in that census.

* Excludes Institutional and Houseless households.

6. SCHEDULED CASTES AND SCHEDULED TRIBES

There are about 474 individual Scheduled Castes and about 532 Scheduled Tribes in India. The Scheduled Castes and Scheduled Tribes constitute, respectively, 15.75 per cent and 7.76 per cent of the total population of the country as per the 1981 Census.

The Scheduled Castes and Scheduled Tribes today are at different levels of socio-economic development. While a great many of the Scheduled Castes are engaged as agricultural labourers there are still an appreciable number among them who are engaged as sweepers, scavengers, leather workers and village menials. The Scheduled Tribes, on the other hand, are considered as special groups of agriculturists but a few among them still eke out an existence through hunting, fishing and food gathering.

PROPORTION OF SCHEDULED CASTES AND SCHEDULED TRIBES TO TOTAL POPULATION 1981

Percentage of Scheduled Caste population is negligible in Mizoram.

Note: No tribes were scheduled by the President of India for Haryana, Jammu & Kashmir, Punjab, Chandigarh, Delhi and Pondicherry.

7. RELIGION

Religion is one of the important characteristics of the population of our country. Several religions have thrived from time immemorial in India which is a secular State and every decennial census provides an interesting picture of the religious persuasions of the people. Data on religion produced by the census are of interest to the layman and the scholar alike.

The figures are based on the information collected on the religion of the head of household through the household schedules canvassed at the 1981 Census. These are presented for each of the religious communities—Hindus, Muslims, Christians, Sikhs, Buddhists and Jains. Data in respect of other religions and persuasions also find place in the table. In the Census, information on religion is recorded as returned by the person enumerated. If anybody said he has no religion, it was recorded as such.

8. LANGUAGE

The plethora of language census literature that has grown over the last one hundred years and more has been throwing a flood of light on the ethnic and linguistic mosaic of our population. During the census enumeration the raw returns on language are unusually large. All these returns are scrutinised following usual linguistic methods. The distribution of speakers of languages, specified in the Schedule VIII of the Constitution, is given.

9. HOUSING

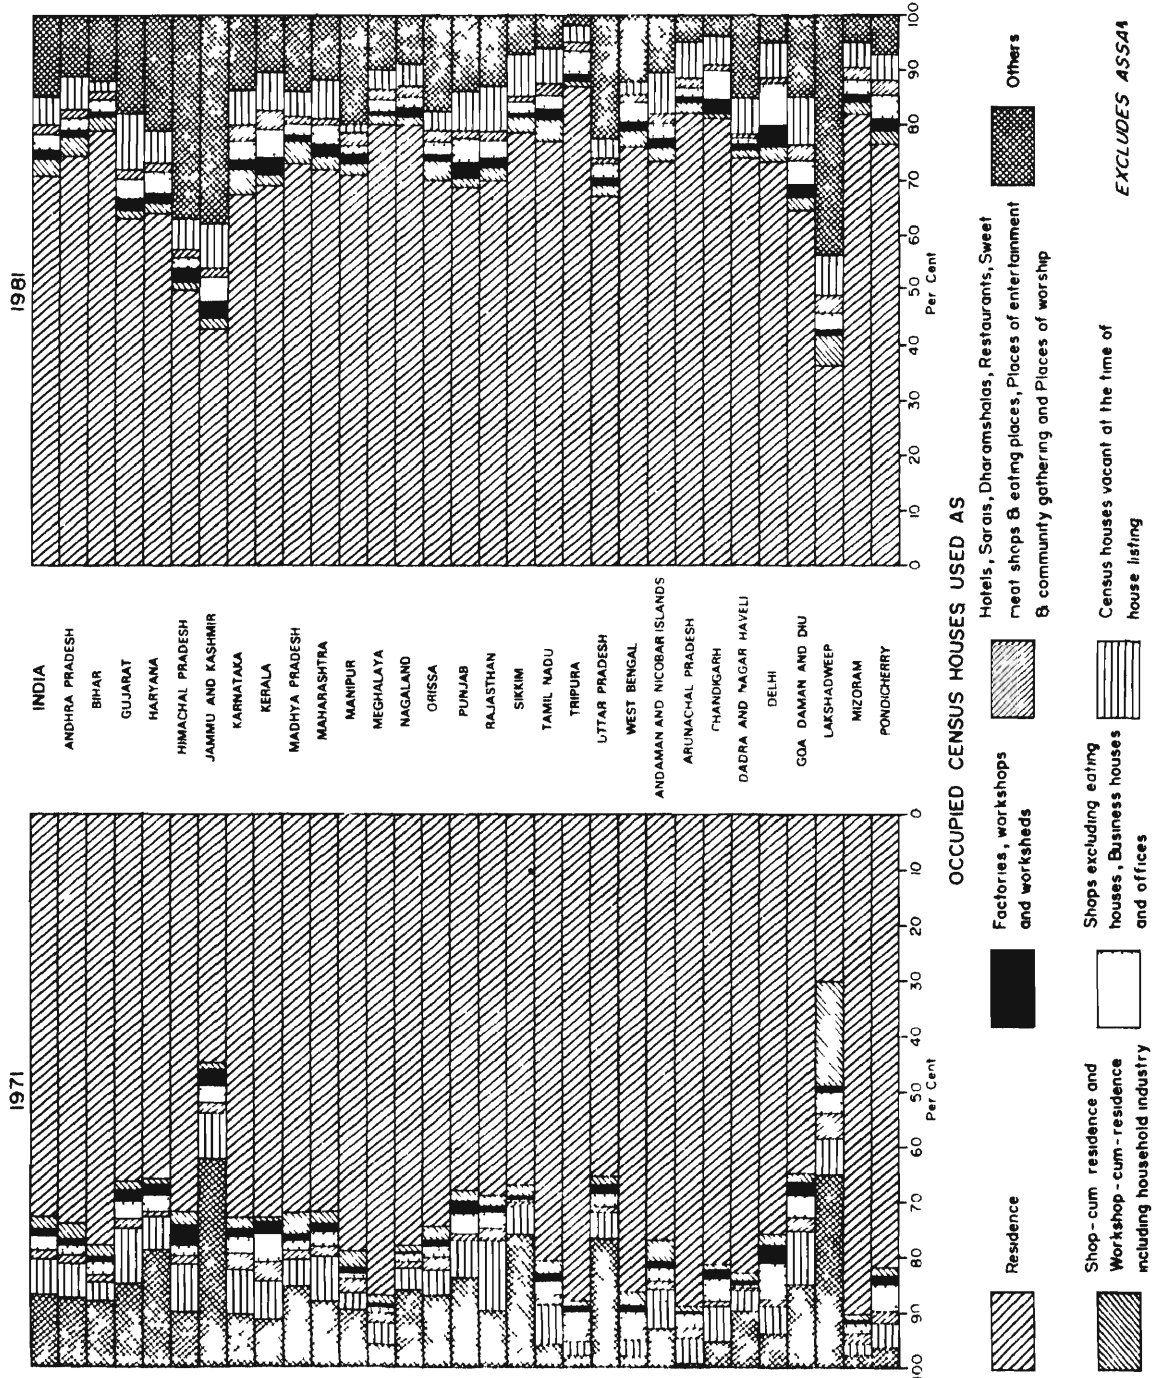

During the Houselisting Operations preceding the 1981 Census, a complete inventory of buildings and census houses was prepared. About 151 million census houses were listed during this operation.

About 71 per cent of the census houses were exclusively used for residential purposes and about 2.9 per cent were used as shop/workshop-cum-residence.

For the first time in the 1981 Census information was collected on some basic amenities available to households. It was revealed that 14.7 per cent of the rural and 62.5 per cent of the urban households were living in electrified houses. For drinking water facility, 61.6 per cent of the households in rural areas were dependent on wells whereas, in urban areas, protected water supply was available to 63.2 per cent of the households. The information in regard to availability of toilet facility in urban areas showed that 58.2 per cent of the households had this facility.

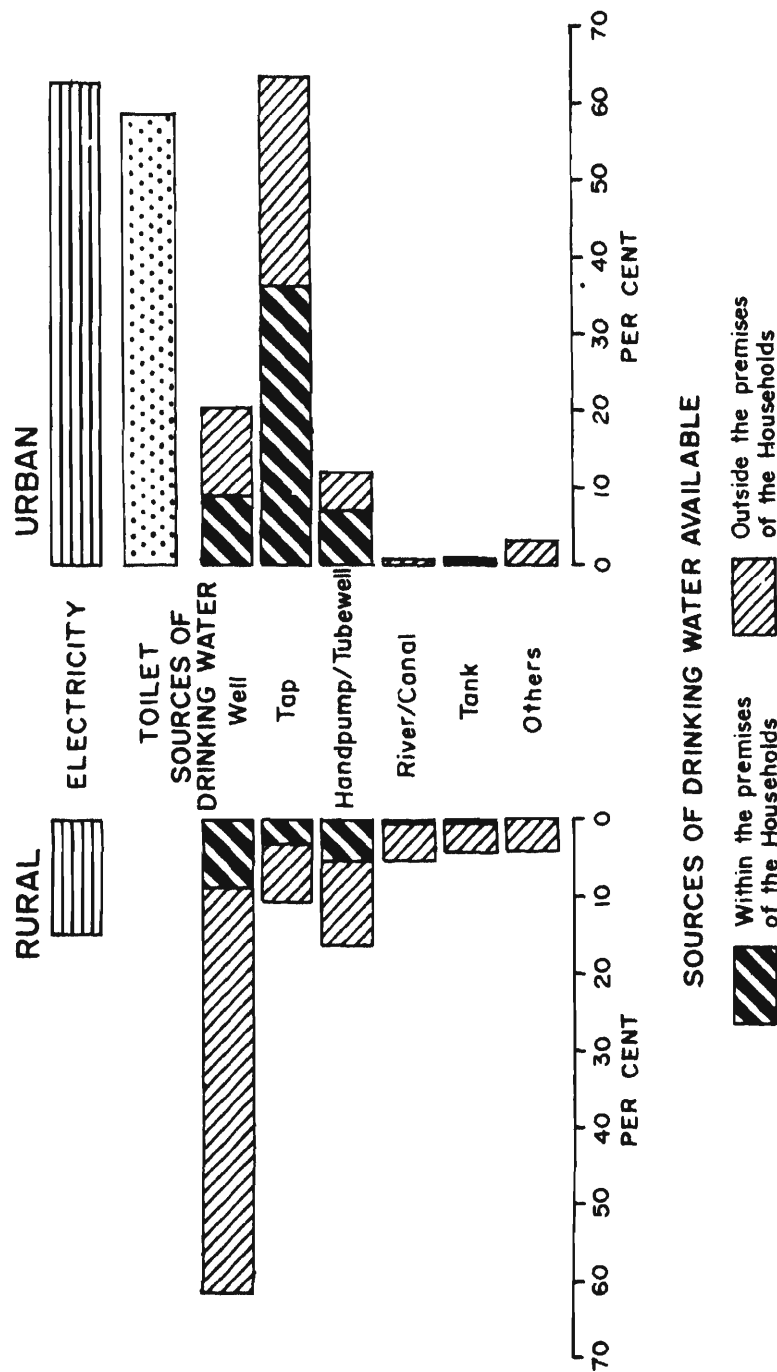

CENSUS HOUSES AND THEIR USES 1971 & 1981

[BY STATES AND UNION TERRITORIES]

INDIA

AVAILABILITY OF AMENITIES TO THE HOUSEHOLDS 1981

(i) Figures for River / Canal and Others relating to facility within the premises in urban areas are negligible.
(ii) The question relating to toilet facilities in rural areas was not canvassed.
(iii) The question relating to amenities were not canvassed for the institutional households.
(iv) Excludes Assam.

* The question relating to toilet facilities was not canvassed in rural areas.

Notes: 1. Excludes Assam

2. The questions relating to amenities were not canvassed for the institutional households.

3. N - Negligible

10. PROJECTIONS

The population of India (including Assam) was 685.2 million on 1st March, 1981. An analysis of the fertility and mortality trends during the past decade indicated that during the decade 1971-81, life expectancy has increased and fertility has declined. The Expert Committee on Population Projections estimated that the population of India would increase to 837.2 million by 1991 and 986.1 million by 2001. The population of India would thus have more than quadrupled in a century.

The projections assume that the expectation of life at birth which was 54.1 years for males and 54.7 years for females in 1980 would increase to 62.8 years and 64.2 years, respectively by the quinquennium 1996-2001. As a consequence, crude death rate is likely to reduce from 12.7 in 1980 to 8.4 during 1996-2001. Taking into account the increase in age at marriage, reduction in incidence of widowhood due to increased life expectancy and the likely achievements in family planning, crude birth rate is expected to decline from 34.7 in 1980 to 23.7 by 1996-2001. The projections assume that efforts would be made to intensify the family planning.

The projections based on these assumptions would imply a decline in the growth rate of population from about 2.2 per cent in the base year 1981 to about 1.5 per cent by 1996-2001.

The annual addition to the population is likely to be of the order of 15.18, 15.24, 15.20 and 14.57 million,

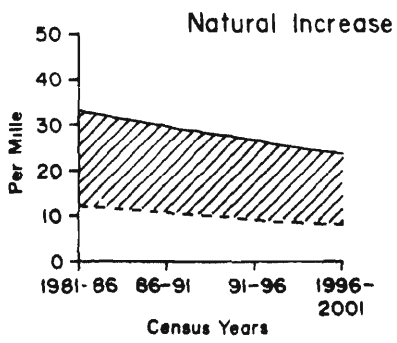

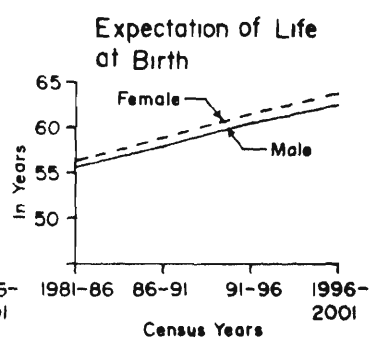

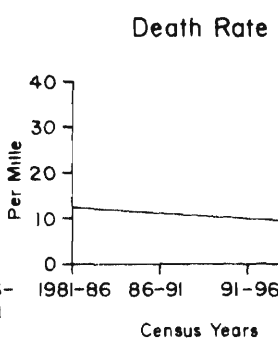

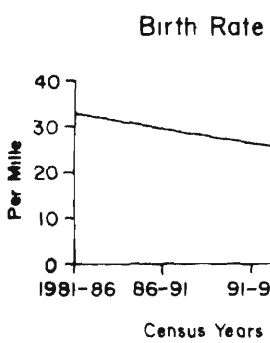

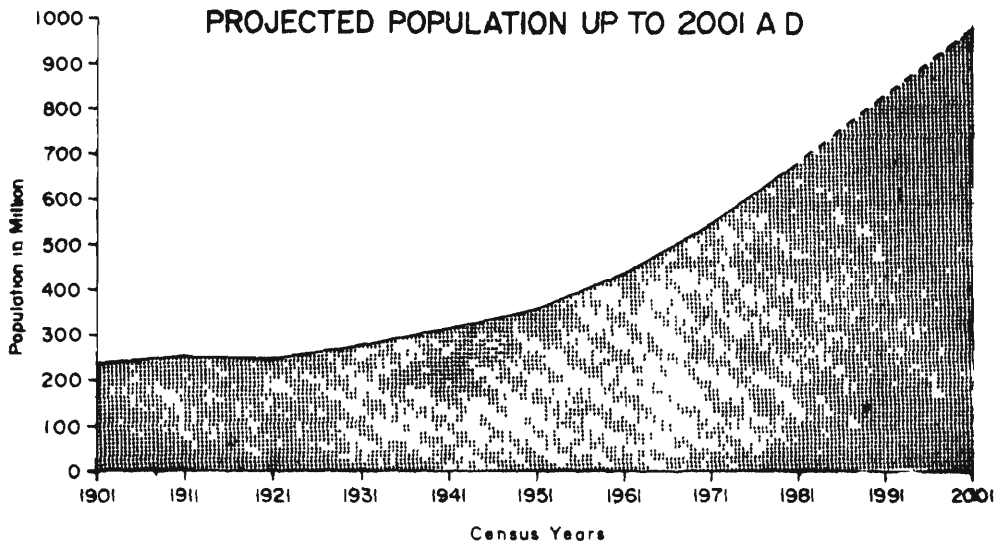

respectively, in the periods 1981-86, 1986-91, 1991-96 and 1996-2001. In other words, population pressure in terms of absolute additions is likely to ease only by 1991. Even then the absolute annual additions to the population are likely to be higher than those witnessed during the decade 1971-81 i.e., 13.7 million.

The urban population is expected to increase from about 160 million in 1981 to 326 million by 2001. That is, it would be more than doubled in a span of 20 years.

An interesting feature is that the population of Uttar Pradesh is likely to be around 166 million by the turn of the century and that of Bihar more than 105 million. Together, the population of these two states would be 271 million by 2001 which would be much more than the population of the whole of India in 1901.

Population Projections (00's) by Sex as on 1st March, 1981-2001, India, States and Union Territories

India/State/ Union Territory	Persons Males Females Sex Ratio Rrowth Rate	1981	1986	1991	1996	2001
		3	4	5	6	7
6. Goa, Daman & Diu	P	1,086,8	1,226,0	1,359,1	1,489,2	11,606,5
	M	548,5	617,2	683,0	748,3	807,3
	F	538,3	608,8	676,1	740,9	799,2
	SR	1019	1014	1010	1010	1010
	GR	—	2.4	2.1	1.8	1.5
7. Lakshadweep	P	40,3	43,4	46,9	50,8	55,1
	M	20,4	22,0	23,8	25,8	28,0
	F	19,9	21,4	23,1	25,0	27,1
	SR	1025	1028	1030	1032	1033
	GR	—	1.5	1.6	1.6	1.6
8. Mizoram	P	497,7	600,7	711,2	832,0	956,2
	M	257,2	313,1	371,3	435,1	501,2
	F	236,5	287,6	339,9	396,9	455,0
	SR	1088	1089	1092	1096	1102
	GR	—	3.9	3.4	3.1	2.3
9. Pondicherry	P	604,5	677,7	747,9	811,4	867,6
	M	304,6	340,8	374,7	406,5	434,6
	F	299,9	336,9	373,2	404,9	433,0
	SR	1016	1012	1004	1004	1004
	GR	—	2.3	2.0	1.6	1.3

Note: 1. SR stands for Sex Ratio (males per 1000 females).
2. GR stands for average annual exponential rate of growth (per cent).

APPENDIX

Concepts and definitions

1. Village

The basic unit for rural areas is the revenue village which has definite surveyed boundaries. The revenue village may comprise several hamlets but the entire village has been treated as one unit for presentation of data. In unsurveyed areas, like villages within forest areas, each habitation area with locally recognised boundaries within each forest range officer's beat was treated as one unit (village).

2. Town

The following criteria were adopted for treating a place as town:

(a) All statutory towns, i.e. all places with a municipal corporation, municipal board, cantonment board or notified town area etc.

(b) All other places which satisfy the following criteria:

(i) A minimum population of 5,000;

(ii) Seventy five percent of the male working population engaged in non-agricultural (and allied) activity; and

(iii) A density of population of at least 400 per sq. km. (1,000 per sq. mile).

The workers in occupations of fishing, livestock, hunting, logging, plantations and orchards, etc., (falling in industrial category III) were treated as coming under non-agricultural activities in 1961 and 1971 censuses but in the 1981 census these activities were treated as agricultural activities for the purposes of criteria (ii) above.

3. Urban agglomeration

Very often large railway colonies, university campuses, port areas, military camps etc. come up outside the statutory limits of the city or town but adjoining it. Such areas may not by themselves qualify to be treated as towns but if they formed a continuous spread with the adjoining town, it would only be realistic to treat them as urban. such settlements have been termed as outgrowths (O.G.), and may cover a whole village, or part of a village. Two or more towns may also be contiguous to each other. Such towns

together with their outgrowths have been treated as one urban unit and called 'Urban agglomeration'. An urban agglomeration, therefore, constitutes:

(a) A city or town with contiguous outgrowth(s), the outgrowth being outside the statutory limits but falling within the boundaries of the adjoining village or villages; or

(b) two or more adjoining towns with their outgrowth(s); or

(c) a city with one or more adjoining towns with their outgrowths all of which form a continuous spread.

4. Census house

A Census house is a building or part of a building having a separate main entrance from the road or common courtyard or staircase, etc. used, or recognised as a separate unit. It may be occupied or vacant. It may be used for a residential or non-residential purpose or both.

5. Household

A household is a group of persons who commonly live together and would take their meals from a common kitchen unless the exigencies of work prevented any of them from doing so. There may be a household of persons related by blood or a household of unrelated persons or having a mix of both. Examples of unrelated household are boarding houses, messes, hostels, residential hotels, rescue homes, jails, ashrams, etc. These are called institutional households.

6. Sex Ratio

Females per one thousand males.

7. Density

Population per sq. km.

8. Age

Total years completed by the person last birthday.

9. Never married

A person who has never been married at any time before.

10. Currently married

A person whose marriage is subsisting with spouse living. It may be his/her first marriage or subsequent marriage. The persons who are recognised by custom or society as married and persons in stable de facto union are also considered as currently married.

11. Widowed

A person whose husband or wife is dead and who has not been married again.

- 12. Divorced or separated** A person who has been separated from wife or husband and is living apart with no apparent intention of living together again or who has been divorced either by decree of law court or by an accepted social or religious custom but who has not remarried.
- 13. Literate** A person who can both read and write with understanding in any language is literate. A person who can merely read but cannot write, is not literate. It is not necessary that a person who is literate should have received any formal education or should have passed any minimum educational standard. All children of the age of 4 years or less are treated as illiterates even if the child is going to a school and may have picked up reading and writing a few odd words.
- 14. Literacy rate** The number of literates per hundred population of a particular sex and age group.
- 15. Educational level** The highest educational level attained by the person is recorded, alongwith both technical and general qualifications. For graduate or post-graduate, the major subject is also recorded.
- 16. Work** Work may be defined as participation in any economically productive activity. Such participation may be physical or mental in nature. Work involves not only actual work but also effective supervision and direction of work.
- 17. Main worker** A person who had worked for the major part of the year preceding the date of enumeration, i.e. one who was engaged in any economically productive activity for 183 days or six months or more during the year.
- 18. Marginal worker** A person who worked any time at all in the year preceding the enumeration but did not work for the major part of the year, i.e., one who worked for less than 183 days or six months.
- 19. Non-worker** A person who had not worked any time at all in the year preceding the date of enumeration.
- 20. Cultivator** A person is a cultivator if he or she is engaged either as employer, single worker or family worker in cultivation of land owned or held from government or held from private persons or institutions for payment in money,

in money, kind or share. Cultivation includes supervision or direction of cultivation.

Cultivation includes ploughing, sowing and harvesting and production of cereals and millet crops such as wheat, paddy, jowar, bajra, ragi etc., and pulses, raw jute and kindred fibre crop, cotton, etc. but does not include fruit growing, vegetable growing or keeping orchard or groves or working on plantations like tea, coffee, rubber, cinchona and other medicinal plantations.

- 21. Agricultural labourer** A person who works in another person's land for wages in cash, kind or share of crop is regarded as agricultural labourer. Such a person has no risk in cultivation but merely works in another person's land for wages. An agricultural labourer has no right of lease or contract on land on which he works.
- 22. Household industry** An industry conducted by the head of the household himself/herself and/or by the members of the household at home or within the village in rural areas and only within the precincts of the house where the household lives in urban area. The household industry should not be run on the scale of a registered factory and should be engaged in production, processing, servicing, repairing or making and selling (but not merely selling) of goods.
- 23. Work participation rate** The number of main workers per hundred population of a particular sex.
- 24. Migrant** A person whose birth place/last residence is different from the village or town of enumeration.
- 25. Child-woman ratio** Number of children in the age group 0-4 per thousand females in the age group 15-49.
- 26. Expectation of life at birth** Average number of years, a new born child is expected to live (under current mortality conditions).
- 27. Crude birth rate** Number of live births in a year per thousand population.
- 28. Crude death rate** Number of deaths in a year per thousand population.
- 29. Infant mortality rate** Number of infants dying under one year of age in a year per thousand live births of the same year.

30. Age specific fertility rate

The number of children born alive during the last year per 1000 women of a particular age-group.

31. Age-sex specific mortality rate

The number of deaths during the last year per 1000 population of a particular sex age-group.
